SECURING THE EDGE SYMPOSIUM

“Securing the Edge”- Attend this high profile Symposium covering both the physical and cyber security challenges of keeping valuable assets safe. Recent breaches of Government and Corporate Networks, as well as threats against critical physical infrastructure, highlight the continued lack of preparedness against such events.

Cybercrime is real and growing, driven by state and private criminal activities. Governments and corporations have been violated by recent attacks in Canada and around the Globe. The threat to our infrastructure is also real and present, as the assault on the House of Commons has demonstrated. Seize this opportunity to learn about advanced technologies used to **“Secure The Edge”**.

Why this event and Why NOW?

This symposium will focus on assisting Security Officers and Corporate Stakeholders to recognize and protect against potential breaches of security through policy failures, exploitation of infrastructure weakness and the activity of highly talented hackers attacking anonymously and unexpectedly from anywhere on the global internet.

What will you take away?

Knowledge and awareness of current and potential cyber and physical security threats. How to defend against assaults on the privacy and confidentiality of both owned and entrusted assets and data.

Who will be there?

Key Speakers drawn from leading Canadian and International Organizations will contribute their valuable and unique insights to **“Securing the Edge”**.

Meet and hear industry experts explaining the tools and techniques that are available for the analysis of attempted and actual penetrations. Examine the physical, financial and emotional damage they cause, what valuable lessons have been learned to stay ahead of the intruders.
